twitter

the cube-shaped nesting box twitter turns every tree into a design hotel. the outer covering made from stainless or corten steel serves as rain shelter. inside the birds find a cosy, species-appropriate room made entirely from wood. the steel cover does not lie against the wooden interior, so that the air can circulate well in between.

twitter

no tree? no bush?  
no problem!

screwed onto a pile twitter becomes a habitable work of art. affixed to the house wall it is a distinctive designer piece.

monochrome, polychrome – everything but uniform!
